Transform your underwriting operations with AI

Empower your underwriting organization with the competitive edge it needs:
Faster decisions,
lower costs and
smarter risk evaluation.

Speed and accuracy in underwriting can make or break your competitive edge.

Manual document processes across multiple formats and sources is a slow, error-prone approach that drives up costs. When seasonal peaks create volume surges, maintaining consistent processing speed and quality becomes even more challenging.

Our comprehensive AI solution transforms this reality. Built on a Hybrid AI approach, EIX-Underwriting handles end-to-end submission processing, extracting granular data from full submissions, triaging risks using your underwriting guidelines and integrating high quality rating and underwriting data directly into core systems. The result is dramatically shorter cycle times, improved pricing precision and optimal risk-return alignment.

Part of the expert.ai EidenAI Suite – a comprehensive, ready-to-deploy enterprise AI solution tailored by industry – EIX-Underwriting empowers you to achieve breakthrough performance in risk assessment and policy pricing across all commercial lines, using a proven Hybrid AI methodology.

KEY CAPABILITIES

Intelligent submission processing
Our advanced ingestion pipeline automatically classifies, normalizes and extracts critical data from complex structured and unstructured submissions, delivering structured information directly into your underwriting workflows.

Smart document management
Automatically categorize documents by type, determine optimal extraction methodology and apply appropriate privacy controls, ensuring compliance while maximizing processing efficiency.

Strategic workflow routing
Intelligently prioritize and route submissions based on business criteria including renewals, new business opportunities and policy modifications, optimizing resource allocation.

Seamless integration
Connect effortlessly with your existing policy administration systems, underwriting workbenches, CRM platforms and broker portals through standardized APIs with built-in data normalization and augmentation capabilities.

BENEFITS

Improve operational efficiency, accelerating submission processing by 50-60%.

Achieve measurable improvements in cycle times and underwriting profitability.

Reduce operational costs through intelligent automation.

Boost broker satisfaction with faster response times and improve quote-to-bind conversion rates.

Extract precise information from complex submission packages with unprecedented accuracy.

Automatically flag missing critical information to support informed decision making.

Deliver 24/7 processing capacity with highly accurate data.

Strengthen competitive positioning with superior service delivery.
